INVESTMENT OBJECTIVE AND STRATEGY

The Chinabank Short-Term Fund intends to achieve a high level of liquidity and better earnings potential than those offered by money market placements, regular savings deposit and short-term time deposit accounts by investing in a diversified portfolio of marketable financial instruments including deposits issued by financial institutions, money market instruments, government securities, BSP securities, corporate bonds/notes with a weighted average portfolio modified duration of not more than one (1) year, and preferred shares classified as debt securities. The Fund aims to outperform its benchmark which is the Bloomberg Philippine Sovereign Bond Index Money Market (BPHILMM Index).

CLIENT SUITABILITY

A client profiling process shall be performed prior to participating in the Fund to guide the prospective investor if the Fund is suited to his/her investment objectives and risk tolerance. Before deciding to invest, clients are advised to read the Declaration of Trust, a copy of which is available at the Trustee's principal office.

The Chinabank Short-Term Fund is suitable only for investors who:

- have a moderate risk appetite;
- are willing to assume a certain level of risk in consideration for higher returns; and
- have an investment horizon of at least one (1) year.

KEY RISKS AND RISK MANAGEMENT

The client should not invest in this Fund if the client does not understand or is not comfortable with the accompanying risks.

- **Interest Rate Risk.** This is the possibility for an investor to experience losses due to changes in interest rates. The purchase and sale of a debt instrument may result in profit or loss because the value of a debt instrument changes inversely with prevailing interest rates.
- **Market/Price Risk.** This is the possibility for an investor to experience losses due to changes in the market price of securities. It is the exposure to the uncertain market value of a portfolio due to price fluctuations.
- **Liquidity Risk.** This is the possibility for an investor to experience losses due to the inability to sell or convert assets into cash immediately or in instances where conversion to cash is possible but at a loss. These may be caused by different reasons such as trading in securities with small or few outstanding issues, absence of buyers, limited buy/sell activity or underdeveloped capital market.
- **Credit/Default Risk.** This is the possibility for an investor to experience losses due to a borrower's failure to pay principal and/or interest in a timely manner on instruments such as bonds, loans or other forms of security which the borrower issued. It also includes risk on a counterparty (a party the Trustee trades with) defaulting on a contract to deliver its obligation either in cash or securities.
- **Reinvestment Risk.** This is the possibility for an investor to have lower returns or earnings when maturing funds or the interest earnings of funds are reinvested.

The Trustee only transacts with reputable counterparties and invests in debt securities issued by prime corporate borrowers which have undergone a rigorous accreditation and evaluation process. Regulatory exposure limits as well as the Fund's average duration are monitored regularly to ensure that exposures are managed. The Fund also employs risk management measures to monitor significant declines in the Fund's NAVPu and alert the Trustee to review current strategies and take corrective action as necessary. The Fund also undergoes an annual review to ensure that it is equipped to fund any redemption requirement in a timely manner and at a reasonable cost during times of financial stress.

The BPHILMM Index is a systematically designed, rules-based, market value-weighted index that measures the performance of short-term, fixed-rate and zero-coupon local currency securities that are publicly issued by the Philippines. It includes liquid money market instruments such as treasury bills with maturities of less than 1 year and minimum par amounts of Php3.0Bn. This Index is adjusted for tax by the Trustee, but does not reflect deductions for fees and expenses. Additional information on the benchmark and/or its administrator can be found on Bloomberg, and be made available to investors upon request.

The benchmark provides a reference for evaluating the performance of highly liquid, peso-denominated marketable fixed income securities with a duration of not more than 1 year, which are among the allowable investments of the Fund.

OUTLOOK AND STRATEGY

In July, the peso yield curve bear-steepened as renewed Middle East tensions, higher oil prices, and rising global yields revived inflation concerns. On average, yields rose 32 basis points (bps) month-on-month, with the belly and long end underperforming. Short-end rates declined, with the 1-, 3-, and 6-month yields falling by 17 bps, 15 bps, and 8 bps to 4.77%, 5.03%, and 5.53%, respectively, while the 1-year yield was broadly unchanged at 5.95%. The sell-off was led by the belly, with the 2-year yield rising 40 bps to 6.70% and the 5-year yield increasing 57 bps to 7.33%. At the long end, the 10-year yield rose 52 bps to 7.43%, while the 20- to 25-year tenors increased by around 56 bps on average. Trading activity moderated, with volumes declining 8% to Php1.01 trillion. FXTNs accounted for 41% of total volume, followed by Treasury bills at 32% and RTBs at 22%.

Philippine economic conditions remained constrained by weak growth and elevated inflation. Inflation eased to 6.4% in June from 6.8% in May and 7.2% in April but remained well above the BSP's target range. Following the 2.8% GDP growth recorded in 1Q2026,

concerns over the growth outlook persisted, with policymakers highlighting the need for stronger economic activity in the succeeding quarters. BSP Governor Remolona also reiterated that the economy could absorb additional policy tightening if necessary, underscoring the central bank's commitment to anchoring inflation expectations. Meanwhile, labor market conditions remained resilient, with unemployment improving to 4.7% in June from 4.8% in May and labor force participation increasing to 64.8%.

In the primary market, the Bureau of the Treasury (BTr) continued to see healthy demand for Treasury bill offerings, with bid-to-cover ratios ranging from 2.2x to 2.8x and auction yields settling at 5.10%, 5.69%, and 5.97% for the 91-, 182-, and 364-day tenors, respectively. The BTr also auctioned 35-day and 63-day cash management bills, raising Php80.0 billion in the July 20 offering. Investor appetite for Treasury bonds was more selective amid rising yields, resulting in lower bid-to-cover ratios of around 1.6x. Looking ahead, markets will remain focused on inflation trends, BSP policy signals, and developments in global oil prices and geopolitical risks. The Fund will continue to maintain diversified fixed-income exposures to preserve liquidity while seeking to optimize portfolio returns.

INVESTMENT POLICY / PROSPECTIVE INVESTMENTS

The Fund may be invested or reinvested in the following:

- a) Securities issued by or guaranteed by the Philippine government or the Bangko Sentral ng Pilipinas (BSP);
- b) Tradable fixed income securities issued by private and public corporations which are listed and traded in an organized exchange/market such as bonds, notes and preferred shares which are classified as debt securities under appropriate accounting standards;
