INVESTMENT OBJECTIVE AND STRATEGY

The Chinabank Money Market Fund intends to achieve a high level of liquidity and better earnings potential than those offered by regular savings and short-term time deposit accounts by investing in a diversified portfolio of marketable fixed income securities comprised of deposits, tradable money market instruments, government securities and corporate bonds and notes with a weighted average portfolio modified duration of not more than one (1) year. The Fund aims to outperform its benchmark which is the Bloomberg Philippine Sovereign Bond Index Money Market (BPHILMM Index).

CLIENT SUITABILITY

A client profiling process shall be performed prior to participating in the Fund to guide the prospective investor if the Fund is suited to his/her investment objectives and risk tolerance. Before deciding to invest, clients are advised to read the Declaration of Trust, a copy of which is available at the Trustee's principal office.

The Chinabank Money Market Fund is suitable only for investors who:

- have a moderate risk appetite;
- are willing to assume a certain level of risk in consideration for higher returns; and
- have an investment horizon of at least one (1) year.

KEY RISKS AND RISK MANAGEMENT

The client should not invest in this Fund if the client does not understand or is not comfortable with the accompanying risks.

- **Interest Rate Risk.** This is the possibility for an investor to experience losses due to changes in interest rates. The purchase and sale of a debt instrument may result in profit or loss because the value of a debt instrument changes inversely with prevailing interest rates.
- **Market/Price Risk.** This is the possibility for an investor to experience losses due to changes in the market price of securities. It is the exposure to the uncertain market value of a portfolio due to price fluctuations.
- **Liquidity Risk.** This is the possibility for an investor to experience losses due to the inability to sell or convert assets into cash immediately or in instances where conversion to cash is possible but at a loss. These may be caused by different reasons such as trading in securities with small or few outstanding issues, absence of buyers, limited buy/sell activity or underdeveloped capital market.
- **Credit/Default Risk.** This is the possibility for an investor to experience losses due to a borrower's failure to pay principal and/or interest in a timely manner on instruments such as bonds, loans or other forms of security which the borrower issued. It also includes risk on a counterparty (a party the Trustee trades with) defaulting on a contract to deliver its obligation either in cash or securities.
- **Reinvestment Risk.** This is the possibility for an investor to have lower returns or earnings when maturing funds or the interest earnings of funds are reinvested.

The Trustee only transacts with reputable counterparties and invests in debt securities issued by prime corporate borrowers which have undergone a rigorous accreditation and evaluation process. Regulatory exposure limits as well as the Fund's average duration are monitored regularly to ensure that exposures are managed. The Fund also undergoes an annual review to ensure that it is equipped to fund any redemption requirement in a timely manner and at a reasonable cost during times of financial stress.

The BPHILMM Index is a systematically designed, rules-based, market value-weighted index that measures the performance of short-term, fixed-rate and zero-coupon local currency securities that are publicly issued by the Philippines. It includes liquid money market instruments such as treasury bills with maturities of less than 1 year and minimum par amounts of Php3.0Bn. The Index is adjusted for tax by the Trustee, but does not reflect deductions for fees and expenses. Additional information on the benchmark and/or its administrator can be found on Bloomberg, and be made available to investors upon request.

The benchmark provides a reference for evaluating the performance of highly liquid, peso-denominated marketable fixed income securities with a duration of not more than 1 year, which are among the allowable investments of the Fund.

OUTLOOK AND STRATEGY

In May, the peso yield curve shifted higher across tenors as inflation came out largely above expectations. On average, yields rose 58 basis points (bps) month-on-month, with the long-end underperforming. Short-end rates increased by 54 bps on average, with the 1-year yield climbing the most by 89 bps to 6.11%. The belly also moved higher, led by the 5-year rate, up 47 bps to 7.34%, while the 2-year yield rose sharply by 76 bps to 6.80%. At the long end, the 10-year rate increased by 56 bps to 7.52%, while ultra-long tenors rose by around 65 bps. Trading activity further moderated for the month, with volumes falling 25% to Php718.6 billion, comprised mainly of FXTNs at 33% of total volume, followed by RTBs at 27% and Treasury bills at 23%.

Philippine macro conditions weakened further as 1Q2026 GDP growth slowed to 2.8%, the weakest since the pandemic, driven by weak consumption and a contraction in investment, raising stagflation concerns. Inflation accelerated sharply to 7.2% in April from 4.1%, led by higher transport, food, and rice prices, while peso weakness eroded purchasing power and lifted core inflation. In response, the Bangko Sentral ng Pilipinas raised policy rates by 25 bps to 4.50% and signaled continued vigilance against inflation, even as growth risks persist. Meanwhile, market conditions tightened with a sharp sell-off in peso government securities, while fiscal pressures increased as national debt reached a record Php18.49 trillion. External support remained modest, with remittance growth slowing to 2.3% year on year, although bank lending stayed resilient, expanding by 10.7% amid strong liquidity conditions.

In the primary market, the Bureau of the Treasury (BTr) auctions remained generally well subscribed, raising Php144 billion in bills and Php120 billion in bonds during the month. Treasury bill auctions saw healthy demand, with bid-to-cover ratios (B2C) averaging around 1.6x, though slightly lower than previous months as rates increased by 84 bps on average. Bond demand was mixed with B2C averaging 1.8x, with the BTr rejecting or partially awarding several auctions, such as the 7-year and 20-year auctions, to cap borrowing costs amid rising yields. Looking ahead, markets will monitor monetary policy signals, macroeconomic data, and developments on the Iran war, while the Fund maintains diversified allocations in fixed income to preserve liquidity while optimizing return.

INVESTMENT POLICY / PROSPECTIVE INVESTMENTS

The Fund may be invested or reinvested in the following:

- a) Securities issued by or guaranteed by the Philippine government or the Bangko Sentral ng Pilipinas (BSP);
- b) Tradable fixed income securities issued by private and public corporations which are listed and traded in an organized exchange/market such as bonds, notes and preferred shares which are classified as debt securities under appropriate accounting standards;
- c) Deposits and tradable money market instruments issued by local banks, including those of the Trustee's own bank, and foreign banks or their Philippine branches or any financial institution in any foreign country;
- d) Financial derivatives instruments solely for the purpose of hedging risk exposures of the existing investments of the Fund, provided that these are accounted for in accordance with existing BSP hedging guidelines as well as the Trustee's risk management and hedging policies duly approved by the Trust Investment Committee and disclosed to participants; and
- e) Such other tradable investment outlets/categories as the BSP may allow.
