INVESTMENT OBJECTIVE AND STRATEGY

The Chinabank Philippine Equity Index Tracker Fund intends to achieve capital appreciation by investing in a diversified portfolio of equities representative of the Philippine Stock Exchange Index (PSEi) composition and its corresponding weights. The Fund aims to mirror the returns of its benchmark, which is the Philippine Stock Exchange PSEi Total Return Index (PSEi TRI).

CLIENT SUITABILITY

A client profiling process shall be performed prior to participating in the Fund to guide the prospective investor if the Fund is suited to his/her investment objectives and risk tolerance. Before deciding to invest, clients are advised to read the Declaration of Trust, a copy of which is available at the Trustee's principal office.

The Chinabank Philippine Equity Index Tracker Fund is suitable only for investors who:

- have an aggressive risk appetite;
- are willing to accept higher risks involving volatility of returns and possible erosion of principal in return for capital appreciation and potentially better long-term results; and
- have an investment horizon of at least five (5) years.

KEY RISKS AND RISK MANAGEMENT

The client should not invest in this Fund if the client does not understand or is not comfortable with the accompanying risks.

- **Market/Price Risk.** This is the possibility for an investor to experience losses due to changes in the market price of securities. It is the exposure to the uncertain market value of a portfolio due to price fluctuations. Given that the Fund may be invested up to 95% in equity issues at any point in time, investors are deemed to be more exposed to this risk.
- **Liquidity Risk.** This is the possibility for an investor to experience losses due to the inability to sell or convert assets into cash immediately or in instances where conversion to cash is possible but at a loss. These may be caused by different reasons such as trading in securities with small or few outstanding issues, absence of buyers, limited buy/sell activity or underdeveloped capital market.
- **Credit/Default Risk.** This is the possibility for an investor to experience losses due to a borrower's failure to pay principal and/or interest in a timely manner on instruments such as bonds, loans or other forms of security which the borrower issued. It also includes risk on a counterparty (a party the Trustee trades with) defaulting on a contract to deliver its obligation either in cash or securities.
- **Reinvestment Risk.** This is the possibility for an investor to have lower returns or earnings when maturing funds or the interest earnings of funds are reinvested.
- **Index Tracking Risk.** This is the possibility that an investor will not be able to achieve a return that mirrors the index due to operational and fund management expenses.

The Trustee only transacts with reputable counterparties and invests in equities issued by prime companies which have undergone a rigorous accreditation and evaluation process. Internal and regulatory exposure limits are monitored regularly to ensure that exposures are managed. The Fund also employs risk management measures to monitor significant declines in the Fund's NAVPu and alert the Trustee to review current strategies and take corrective action as necessary. Furthermore, the Fund undergoes an annual review to ensure that it is equipped to fund any redemption requirement in a timely manner and at a reasonable cost during times of financial stress.

The Fund's benchmark was amended from PSEi to PSEi TRI effective January 1, 2024 in compliance with BSP Circular No. 1178 (Guidelines on the Use of Benchmarks for Unit Investment Trust Funds) on the use of a total return benchmark that will more adequately represent the performance of the Fund.

The PSEi TRI tracks the performance and income from dividend payments of the PSEi constituents by reinvesting cash back to the index. The PSEi is a composite index that tracks the performance of the top 30 publicly listed companies in the Philippines based on market capitalization and is computed using a free-float, market capitalization-weighted methodology. It includes a diversified range of companies from various sectors of the economy including financials, property, industrials, services and holdings firms, among others. This Index is not adjusted for tax by the Trustee and does not reflect deductions for fees and expenses. Additional information on PSEi TRI and/or its administrator is available on www.pse.com.ph/indices.

The benchmark provides a standard for evaluating the Fund's performance by helping investors/participants understand how the Fund is performing relative to the performance of the Philippine equities market as represented by PSEi TRI. The Fund intends to replicate the benchmark's characteristics, including its composition and the corresponding weights of its constituents, to be able to achieve its return objective.

PORTFOLIO COMPOSITION**OTHER DISCLOSURES****RELATED PARTY TRANSACTIONS**

The Fund has deposits with the Bank Proper, amounting to Php294.96 thousand, which were approved by the Board of Directors/Trust Investment Committee. Likewise, all related parties transactions are conducted on an arm's length basis.

OUTLOOK AND STRATEGY

July marked the end of the 90-day pause on the reciprocal tariffs announced by US President Donald Trump last April during "Liberation Day." Country-specific rates, initially scheduled to take effect on July 9, were later delayed to August 1, with official notices sent to

²**Volatility** measures the degree to which the Fund fluctuates vis-à-vis its average return over a period of time. This is computed by getting the standard deviation of the yearly returns for the past 12 mos.

³**Sharpe Ratio** is used to characterize how well the return of a Fund compensates the investor for the level of risk taken. The higher the number, the better. This is computed by dividing the excess return of the fund against the risk-free rate over the fund's volatility.

⁴**Information Ratio** measures the reward-to-risk efficiency of the portfolio relative to the benchmark. The higher the number, the higher the reward per unit of risk. This is computed by dividing the excess return of the fund against the benchmark over the fund's volatility.

⁵**Tracking Error** measures how close the Fund's performance is relative to its benchmark. It is computed as the standard deviation of the Fund's return over the benchmark return. The lower the tracking error, the closer the Fund approximates its benchmark.

various countries reflecting updated tariff levels. For the Philippines, the rate was set at 20%, up from the original 17% announced in April. On July 22, during a White House meeting, President Ferdinand Marcos Jr. secured a reduction in the tariff on Philippine exports to 19%. In return, the Philippines agreed to remove tariffs on US goods, specifically automobiles, wheat, soy, and pharmaceutical imports. These trade developments weighed on the Philippine peso, causing it to weaken from 56.322 to 58.325 against the USD. Additionally, diverging monetary policies affected the local currency. While the Bangko Sentral ng Pilipinas (BSP) remained open to easing policy rates in upcoming meetings, the US Federal Reserve kept rates steady during the month, with the market expecting no change in stance when they meet next in September.

The peso's weakness extended to the local equity market. While the MSCI All Country Weighted Index gained 1.28% in USD terms, the Philippine Stock Exchange Index (PSEi) fell 112.21 points, or 1.76%, closing at 6,252.73. Sector performance was generally negative, with Mining and Oil (-7.33%), Financials (-3.89%), Holding Firms (-3.59%), Property (-1.81%), and Industrials (-0.44%) pulling the market lower. Financials underperformed for the third consecutive month amid concerns that potential policy easing would compress bank margins. Conversely, Services (+1.48%) rose, defying the overall market trend. Among index constituents, BLOOM (-20.55%), AGI (-14.63%), AEV (-9.17%), BPI (-9.08%), and CNVRG (-8.12%) led the laggards. On the other hand, PGOLD (+11.11%), ICT (+9.00%), EMI (+8.58%), TEL (+8.22%), and JGS (+5.10%) led the gainers. BLOOM and AGI struggled due to increased regulatory scrutiny on online gaming platforms, with lawmakers and agencies calling for tighter controls and outright bans because of perceived social costs. Separately, sentiment was impacted by a large block sale of SM and SMPH shares worth Php12.6 billion by an institutional investor. Overall, foreigners were net sellers, withdrawing Php1.676 billion during the month.

Year to date, the PSEi is down 4.23%, with total net foreign outflows of Php40.29 billion. Q2 earnings season is underway, with BPI, BDO, CBC, and MER, which collectively constitute about a quarter of the index weight, reporting weighted earnings growth of 6.22%. The remaining index members will release results in the coming month, along with the expected announcement of the PSEi rebalancing.
