INVESTMENT OBJECTIVE AND STRATEGY

The Chinabank Short-Term Fund intends to achieve a high level of liquidity and better earnings potential than those offered by money market placements, regular savings deposit and short-term time deposit accounts by investing in a diversified portfolio of marketable financial instruments including deposits issued by financial institutions, money market instruments, government securities, BSP securities, corporate bonds/notes with a weighted average portfolio modified duration of not more than one (1) year, and preferred shares classified as debt securities. The Fund aims to outperform its benchmark which is the Bloomberg Philippine Sovereign Bond Index Money Market (BPHILMM Index).

CLIENT SUITABILITY

A client profiling process shall be performed prior to participating in the Fund to guide the prospective investor if the Fund is suited to his/her investment objectives and risk tolerance. Before deciding to invest, clients are advised to read the Declaration of Trust, a copy of which is available at the Trustee's principal office.

The Chinabank Short-Term Fund is suitable only for investors who:

- have a moderate risk appetite;
- are willing to assume a certain level of risk in consideration for higher returns; and
- have an investment horizon of at least one (1) year.

KEY RISKS AND RISK MANAGEMENT

The client should not invest in this Fund if the client does not understand or is not comfortable with the accompanying risks.

- **Interest Rate Risk.** This is the possibility for an investor to experience losses due to changes in interest rates. The purchase and sale of a debt instrument may result in profit or loss because the value of a debt instrument changes inversely with prevailing interest rates.
- **Market/Price Risk.** This is the possibility for an investor to experience losses due to changes in the market price of securities. It is the exposure to the uncertain market value of a portfolio due to price fluctuations.
- **Liquidity Risk.** This is the possibility for an investor to experience losses due to the inability to sell or convert assets into cash immediately or in instances where conversion to cash is possible but at a loss. These may be caused by different reasons such as trading in securities with small or few outstanding issues, absence of buyers, limited buy/sell activity or underdeveloped capital market.
- **Credit/Default Risk.** This is the possibility for an investor to experience losses due to a borrower's failure to pay principal and/or interest in a timely manner on instruments such as bonds, loans or other forms of security which the borrower issued. It also includes risk on a counterparty (a party the Trustee trades with) defaulting on a contract to deliver its obligation either in cash or securities.
- **Reinvestment Risk.** This is the possibility for an investor to have lower returns or earnings when maturing funds or the interest earnings of funds are reinvested.

The Trustee only transacts with reputable counterparties and invests in debt securities issued by prime corporate borrowers which have undergone a rigorous accreditation and evaluation process. Regulatory exposure limits as well as the Fund's average duration are monitored regularly to ensure that exposures are managed. The Fund also employs risk management measures to monitor significant declines in the Fund's NAVPu and alert the Trustee to review current strategies and take corrective action as necessary. The Fund also undergoes an annual review to ensure that it is equipped to fund any redemption requirement in a timely manner and at a reasonable cost during times of financial stress.

The BPHILMM Index is a systematically designed, rules-based, market value-weighted index that measures the performance of short-term, fixed-rate and zero-coupon local currency securities that are publicly issued by the Philippines. It includes liquid money market instruments such as treasury bills with maturities of less than 1 year and minimum par amounts of Php3.0Bn. This Index is adjusted for tax by the Trustee, but does not reflect deductions for fees and expenses. Additional information on the benchmark and/or its administrator can be found on Bloomberg, and be made available to investors upon request.

The benchmark provides a reference for evaluating the performance of highly liquid, peso-denominated marketable fixed income securities with a duration of not more than 1 year, which are among the allowable investments of the Fund.

OUTLOOK AND STRATEGY

In April, the Philippine peso yield curve bear-flattened as investors stayed cautious amid geopolitical uncertainties and increased bond supply from the Bureau of the Treasury's (BTr) jumbo 10-year issuance. Average yields rose by 4 basis points (bps) month-on-month, led by a 7-bp increase at the short end, although the 1-year rate fell by 2 bps to 5.7469%. The belly and long end rose by 2 bps and 5 bps, respectively. Bond trading activity declined by 2.3% to Php1.093 trillion from March's Php1.118 trillion, as volumes fell across most fixed income assets, except for FXTNs. Volume for FXTNs jumped 30% and accounted for 34% of the month's total trading, driven mainly by the strong demand for the new 10-year issuance.

March inflation eased more than expected to 1.8% year-on-year from February's 2.8%, bringing the year-to-date average to 2.2%, which was well within the Bangko Sentral ng Pilipinas' (BSP) 2–4% target range. The slowdown was led by softer price increases in food and

beverages, accommodation, and transport. Core inflation also declined to 2.2%. In response to the more favorable inflation environment, the BSP resumed policy easing with a 25-bp rate cut, bringing the key rate to 5.5%. Governor Remolona cited reduced uncertainty, including softer-than-expected U.S. tariffs on Philippine goods. He also warned of risks from global trade tensions, but nonetheless, additional 25-bp cuts remain on the table this year.

In the primary market, the BTr successfully raised Php390 billion in bonds and Php99.46 billion in bills. It auctioned off 5-, 7-, and 10-year tenor bonds, with the 10-year FXTN 10-73 raising a total of Php300 billion. The FXTN was issued on April 28 at a 6.375% coupon within market expectations. Demand remained strong, with average bid-to-cover ratios of 1.94x for bonds and 2.90x for bills. Moving forward, markets will continue to be on watch for inflation, the release of 1st quarter GDP, and other key macroeconomic data. With this, the Fund continues to maintain a strategic allocation across BSP bills, government securities, time deposits and corporate bonds to balance liquidity and returns.

INVESTMENT POLICY / PROSPECTIVE INVESTMENTS

The Fund may be invested or reinvested in the following:

- a) Securities issued by or guaranteed by the Philippine government or the Bangko Sentral ng Pilipinas (BSP);
- b) Tradable fixed income securities issued by private and public corporations which are listed and traded in an organized exchange/market such as bonds, notes and preferred shares which are classified as debt securities under appropriate accounting standards;
- c) Deposits and tradable money market instruments issued by local banks, including those of the Trustee’s own bank, and foreign banks or their Philippine branches or any financial institution in any foreign country;
- d) Financial derivatives instruments solely for the purpose of hedging risk exposures of the existing investments of the Fund, provided that these are accounted for in accordance with existing BSP hedging guidelines as well as the Trustee’s risk management and hedging policies duly approved by the Trust Investment Committee and disclosed to participants; and
- e) Such other tradable investment outlets/categories as the BSP may allow.
